

DevOps Engineer (m/f/d)

Düsseldorf / Permanent position

We are:

Are you looking for new challenges and career opportunities? Do you want to actively shape your future? Then join us! We are IT Service & Engineering service providers in Germany. Apply now and show us what you're made of.

These challenges await you:

- You ensure the stable operation and continuous development of our DevOps platform.
- You automate network and platform processes using modern CI/CD pipelines and established DevOps tools.
- Together with our network designers, you will work on the seamless integration and optimization of solutions.
- You always keep an eye on the security of the DevOps platform and consistently develop existing security standards further.
- Through structured documentation and active knowledge sharing, you support the sustainable development of the team.

You bring the following:

- A completed Master's degree in Computer Science with a focus on software development or a comparable qualification.
- Experience in the operation and administration of DevOps platforms.
- Knowledge of automating network and platform processes, for example with GitLab, Ansible, Terraform or Jenkins.
- You are familiar with DevOps technologies such as CI/CD pipelines, Docker and Kubernetes.
- To automate tasks, you probably use scripting languages like Python, Bash, or PowerShell.
- You work analytically, are solution-oriented, and approach challenges in a structured manner.
- You are characterized by your ability to act responsibly and your high level of initiative, as well as your teamwork skills.
- Excellent German skills (at least B2 level) and good English skills.

We bring the following:

- 30 days of vacation
- Mobile working and flexible working time models
- Further training opportunities
- Modern workplace equipment

Please send us CV and Certificates to Info@nm-smarttech.com
